

High-Tech Rides to Rescue of Residential Real Estate

Graph 1: U.S. Monthly Housing Starts Seasonally Adjusted at Annual Rates (SAAR)

United States' annual starts:
 2014 = 1.003 million units (+8.4%);
 2015 = 1.112 million units (+10.9%);
 2016 = 1.174 million units (+5.6%);
 2017 = 1.203 million units (+2.5%);
 2018 = 1.250 million units (+3.9%);
 2019 = 1.291 million units (+3.3%).

U.S. Oct 2020 starts were +4.9% m/m & +14.2% y/y.
 Jan-Oct Avg. 2019 = 1.259 million units;
 Jan-Oct Avg. 2020 = 1.354 million units (+7.6%).

[Article was originally posted on www.constructconnect.com]

By Alex Carrick

In the early days of the coronavirus health crisis, an expectation was held by many analysts in the U.S. and Canada that residential real estate would be devastated. After all, there were enormous jobs and income losses in March and April and with 'social distancing' becoming the rule, there was no taste for 'open houses' or walk-through visitations.

Then a surprising thing happened. High-tech rode to the rescue. Just as video conferencing has saved many businesses in this difficult year, going on-line to view new model and existing homes 'virtually' has provided a necessary lifeline for realtors. Also, sellers and buyers have readily adapted to a new world in which bid negotiations and contract signings are being conducted digitally.

Furthermore, house shopping on the internet is faster. There's no driving to preferred neighborhoods to ring doorbells and look for cracks in the plaster.

And it can be fun, like a video game. Again, technology advances have made this possible. 3D and 360° cameras capture easy visualizations. Interior and exterior, plus daytime and nighttime, shots

fully round out potential purchasers' viewing experiences. The 'coolest' real estate adventure is to see a home offered for sale laid out on a monitor with all its structural features exposed in what's known as a 'doll house' effect.

Better Affordability from Low Mortgage Rates Undercut by Rapid Price Advances

Beginning in early summer, the demand for new and existing housing has been proceeding at a torrid pace. Some of the factors contributing to the feverish activity have been: (1) an accumulation of pent-up demand that has developed over the past decade; (2) an increase in the savings rate that facilitates a faster build-up of a new home down payment; (3) a mobility shift away from dense and, at least as perceived in the moment, less-healthy city cores in favor of the suburbs and rural communities; and (4) all-time low mortgage rates.

Greater mobility as an option has been promoted by the newly widespread practice of working from home. It has also been boosted by a desire on the part of many individuals and families to escape the harmful effects of climate change. Wildfires and hurricanes, plus affordability issues (e.g., rising house prices and cost of insurance), are initiating an exodus from coastal regions to the interior.

The location shifts have been a boon to single-family housing over the multi-family segment of residential real estate. Also, bigger accommodations with more square footage help with the establishment of home office space.

Plus, interesting changes are underway in areas usually reserved for vacation properties. What were secondary residences are becoming primary residences. The appetite for such possibilities is heating up accordingly.

The positive effect on housing demand of bargain interest rates is being somewhat subverted, however, by a surge in prices that is underway. The remainder of this article, mainly through graphs, will delve into the statistics on homebuilding in the U.S. and Canada and how new and existing home prices are reacting.

U.S. New & Existing Homes Marketplace and Prices

In late-2019-early-2020, monthly U.S. housing starts (seasonally adjusted and annualized/SAAR) finally returned to the level generally assumed to be consistent with the need generated by population growth and family formations, around 1.6 million units. Then the pandemic struck, depressing starts below 1.0 million units.

Over the latest four months, though, starts have been much better again, climbing above 1.5 million units in October. The 1.6 million-units figure is a handy benchmark, but it's significance may be overblown. The long-term average of U.S. monthly housing starts, dating back to 2000, has been 1.25 million units SAAR. On that basis, and given that America's population growth has slowed dramatically, October's 1.5 million is looking pretty good.

According to the latest press release from the National Association of Realtors (NAR), U.S. single-family 'existing' (i.e., as opposed to 'new') home sales in September were +21.8% year over year. The median price for single-family homes sold in September was +15.2% y/y.

Unit sales of condos and co-ops in the latest month in the NAR's stats were +13.6% y/y, with a median price climb of +9.9% y/y.

SBA Proposes Small Business Size Standard Revisions in Five Industrial Sectors; Change Aimed at Increasing Eligibility for Contracting and Loan Programs. Public Comments Due by Jan. 26, 2021

NAICS Sector	Sector Name	No. of Industries Reviewed	No. of Industries Reviewed with Increases
61	Education Services	18	14
62	Health Care and Social Assistance	39	18
71	Arts, Entertainment and Recreation	25	11
72	Accommodation and Food Services	15	4
81	Other Services	48	23
Total		145	70

[Article was originally posted on www.sba.gov]

The U.S. Small Business Administration is seeking public comments on a proposed rule that would revise the small business size standards for businesses in five North American Industrial Classification System (NAICS) sectors to increase small business eligibility for SBA's loan and contracting programs.

Comments can be submitted on this proposed rule on or before Jan. 26, 2021 at www.regulations.gov, using the following RIN number: RIN 3245-AG88. You may also comment by mail to Khem R. Sharma, Chief, Size Standards Division, 409 3rd Street SW, Mail Code 6530, Washington, D.C., 20416.

The NAICS sectors reviewed in the proposed rule are: Education Services; Health Care and Social Assistance; Arts, Entertainment and Recreation; Accommodation and Food Services; and Other Services. SBA proposes to increase size standards for 70 industries in those sectors. The following

table includes the number of industries reviewed and the number of industries with proposed increases in size standards by NAICS sector.

SBA estimates that about 4,700 additional firms in these three sectors will become eligible for SBA's programs under the revised size standards, if adopted.

The proposed rule is part of a five-year comprehensive review of small business size standards, as required under the Small Business Jobs Act of 2010. The proposed revisions reflect changes in industry and federal marketplace conditions and SBA's policy position under the current economic situation due to the COVID-19 pandemic. In response to the pandemic, SBA is retaining current size standards where data suggests that size standards should be lowered.

As part of the ongoing review of all size standards, SBA considers the structural characteristics of individual industries, including average firm size, the degree of competition, and federal government contracting trends. This ensures that small business size standards reflect current economic condi-

tions in those industries. The proposed revisions to the size standards in these sectors will enable more small businesses to retain their small business status, and will provide federal agencies a larger pool of small businesses to choose from for small business procurement opportunities and help eligible small businesses benefit from SBA's loan programs.

An SBA-issued White Paper entitled, "SBA'S Size Standards Methodology," which explains how SBA establishes, reviews and modifies its receipts-based and employee-based small business size standards, can be viewed at <http://www.sba.gov/size>.

For more information about SBA's revisions to its small business size standards, visit announcements about updating size standards at <http://www.sba.gov/size>.
