By *Gino Alberto*,

And how construction teams can improve the quality and efficiency of road and highway projects.

Alleviating traffic congestion. Accommodating growing populations. Addressing safety issues. Enhancing local economies.

Those are just a few of the reasons why road construction projects are so important, and they all equate to helping improve the quality of life for residents and permitting industries to continue to move the American economy forward. Today, there are a variety of ambitious major road construction projects underway on some of the country's most traveled highways. The long-term result will be more than worth it for the people, vehicles, and communities they're designed to serve.

Here's a look at some of these transformative major road construction projects and why they're poised to continue to drive America forward.

5 Transformative Road Construction Projects

1. Florida's I-4 Project

Dubbed the "Ultimate Improvement Project," this 21-mile stretch of Central Florida's most heavily trafficked highway is intended to connect communities better, improve economies, and take the quality of life to a new level. Four new express lanes, widened bridges, bridge replacements, new lighting, enhanced landscaping, and more are included in this project, with substantial completion expected by the end of 2021. Also underway is the I-4 extension project, which aims to improve highways 40 additional miles to the east and west of I-4.

2. California's I-405 Widening Project

One of SoCal's most important highways is getting a major overhaul to ease traffic congestion and make way for shorter overall commute times. Specifically, the I-405 widening project will include work across 16 miles of the highway, an area spanning from Long Beach to Costa Mesa. It will include the addition of general purpose lanes and tolled express lanes in each direction, the addition of auxiliary lanes, ramp improvements, inter-

change reconfigurations, upgraded utilities, modified overhead railroad crossings, and more. The total project is expected to cost \$1.2 billion. It's estimated that about 300,000 vehicles travel the highway each day, and traffic volume is expected to increase significantly in 20 years.

3. California's I-5 North Coast Corridor Project

Another big SoCal infrastructure project, workers are improving 27 miles worth of highway along San Diego's northern coastal area. It's a range that encompasses cities that include Oceanside, Carlsbad, Encinitas, and Del Mar, among others. As an essential thoroughway to Mexico and Canada, and an important part of the country's highway transportation system – for tourists, commuters, and trucking alike – the I-5 project will include the addition of high occupancy vehicle lanes, interchange improvements, pavement replacement, and more to help improve safety and reduce congestion. The project is expected to cost \$1.3 billion.

At our discretion, 100% Payment and 100% Performance bonds may be required as a subcontract condition. This will be a PREVAILING WAGE JOB. DGC is an Equal Opportunity/Affirmative Action Employer.

Driving America: 5 Road Construction Projects That Will Transform Transportation

■ Continued from page 1

4. Virginia's Hampton Roads Bridge-Tunnel Expansion Project

The \$3.3-billion Hampton Roads Bridge-Tunnel (or HRBT) expansion is the biggest project in the history of the Virginia Department of Transportation (VDOT). The project will consist of the construction of a four-lane tunnel and a widening from four to eight lanes on I-64 in an area between Hampton and Norfolk. It's a massive undertaking that's expected to greatly enhance travel through one of Virginia's significant through-routes. But Virginia motorists will need to exercise patience, as the project isn't expected to be completed until 2024.

5. Texas' I-635 LBJ East Project

The Dallas area isn't just one of the largest metropolises in the nation, but also among the most congested and in need of improvement. The \$1.7 billion I-635 LBJ East Project aims to ease congestion via the widening and rebuilding of about 11 miles worth of highway. Intersection improvements, the addition of a bridge, and other general improvements are expected when the work is completed. The project is expected to be substantially completed at some point in 2024.

How to Improve Road Construction

The above projects are just a snapshot of the transformative projects that are helping to drive America forward. And as is the case with any construction project, teams should always be looking for ways to improve efficiency and productivity to minimize disruption and deliver roads faster. This is applicable not just in the United States, but worldwide — especially as the world's population continues to increase year over year.

Here's a closer look at three winning strategies that improve road and highway construction:

1. Bring Innovation on Faster

Are you using the right technology on your jobsite? Whether you're looking to further adopt and embrace new technologies, or if your firm is just looking to take its efforts to the next level, there are few tips that you should abide by for best results:

- Easy to deploy, adopt, and use: Aside from any upfront cost in new technology, there's also a time commitment to train workers on how to use it properly. We suggest adopting tools that are accessible on mobile devices in the field and are easy to learn and train large teams on. This is especially relevant on road construction

projects, where crews are likely spread out across miles of workspace, and communication and collaboration are essential for keeping all trades on track.

- Secure cloud collaboration: Cloud computing enables a higher level of collaboration in the field. However, you also need to make sure that any platform you're using is secure. Look for ISO and SOC compliance to ensure enterprise-grade security.
- Supportive of the end-to-end project lifecycle: Look for software that can help your teams work better and more efficiently across every phase of the project. These connected construction platforms don't just support all aspects of the project, but data can also be reviewed to spearhead continuous improvement efforts on future projects.
- Partner networks: If any software you're using supports a connected ecosystem of technology, it will enhance your team's efforts and productivity by reducing data disconnect and loss.

2. Standardize Processes and Innovation

For any technology to serve any project to the max, it needs to be standardized across all project teams. When projects involve large, disperse teams, standardization is essential for keeping everyone on the same page.

Teams should start by outlining the processes in the planning and execution phases on infrastructure projects that they use or expect to use. From there, these processes should be measured, and preliminary standards should be set for teams and stakeholders to define benchmarks to meet. As processes are adhered to over time, teams should continue to measure, mark, and refine processes to better align with the standards they've set. A few areas you can get started with pertaining to standardization include:

- Checklist templates: Standardize and digitize quality and safety programs to keep everyone involved and perform inspections on mobile devices. This also permits teams to report problems in real-time, thereby allowing them to be addressed immediately.
- Tasks and punch lists: Take punch list items to your mobile devices.
- Efficient RFIs: Create and upload templates for creating, reviewing, and approving RFIs.
- Daily activities log: Project progress and performance can be a challenge to track

on large infrastructure jobs, but a standard daily activities log can help your team track labor information, issues, incidents, and even weather conditions.

- Personalized daily views: By standardizing priority action items and identifying teams that need attention, you can keep all workers up to speed on project status.
- Fillable and custom forms from the field: Stay organized and avoid driving back to the office to fill out paperwork. Complete and submit reports directly from the jobsite.

3. Become More Data-Centric

We talk a lot about becoming more data-centric, and infrastructure projects are no exception. Any road and highway project should rely heavily on mass coordination, communication, and the most up to date plan. Otherwise, it's going to be challenging to track progress and assess work quality. The only way to enhance any type of construction — regardless of whether it's infrastructure work or in another market — is to take your data collection and analysis to the next level.

Research indicates that poor technology implementation is potentially costing more than \$175 billion total in lost productivity. Infrastructure projects are particularly at risk of lost productivity due to the amount of time projects take to complete and how spread out crews typically are on jobsites. Every missed detail or vacant data point can lead to a ripple effect that can impact the entire project.

The good news is there are ways to avoid these mistakes and lost productivity — and it starts with becoming more data-centric. Start by connecting the design and construction teams through a common data environment. Get rid of the dated, clunky process of sharing files via email — store all data in a single location to streamline productivity and efficiency by boosting collaboration. By starting early and connecting everyone in all phases of the project, you'll be able to anticipate delays and other issues better before they arise.

Hit the Gas Pedal to New Infrastructure Opportunities

The importance of road construction and infrastructure projects are only going to increase. For road and highway construction teams, now is the time to reassess workflows and adopt the right technology and strategies to take your firm's efforts to the next level.

Public Legal Notices

UNIVERSITY OF CALIFORNIA, IRVINE MEDICAL CENTER

NOTICE INVITING GENERAL CONTRACTOR, ELECTRICAL OR MECHANICAL SUBCONTRACTOR PREQUALIFICATION

Prequalification Questionnaires will be received by the University of California, Irvine Medical Center (UCIMC) from general contractors, electrical and/or mechanical subcontractors, wishing to submit bids for a lump sum contract for the:

Site Infrastructure & Vehicular Circulation Upgrades, Project No. 994656

PREQUALIFICATION: The University has determined that bidders must be prequalified for this project.

DESCRIPTION OF WORK: The following scopes are included in the Site Infrastructure and Vehicular Circulation Upgrades project: 1) reroute all the utilities in the current overhead canopies, including gas lines, steam supply and condensate return lines, 5KV electrical feeds, chilled water supply and return lines, DI water, fire alarm system wiring, Network IT and Telecom copper and fiber optics, 2) demolish the overhead canopy and parts of the sidewalk, including abatement of the asbestos roofing, 3) relocate storm drain and electrical systems currently running east to west, between buildings 24a and 26, 4) relocate and provide a new sewer, domestic water and fire water connection to building 21, 5) provide new chilled water supply and return lines to building 21 from existing pipes approx. 100 feet away, 6) provide new normal and emergency power, including conduit, feeders, transformers, switchgear and ATSS, from the building 34 to building 21, 7) provide steam supply and condensate return from building 31 to building 21, 8) extend the existing Valet drop off area, currently in front of building 22c, into the current grass area with additional curb and gutter, concrete and asphalt roadway, bollards, sidewalks, benches and landscaping, 9) provide Network IT and Telecom fiber for building 21 from adjacent locations, 10) relocate existing building 22A backflows and water meters for a new building 22A entry, 11) demolish building 80, 12) construct a new road with curb and gutter from the south side of the building 55 parking lot connecting to Service Way South, 13) concrete crosswalks, across the new road with adjacent sidewalks and landscaping, 14) and other work related to the items above.

PROJECT COMPLETION TIME:

200 calendar days.

ESTIMATED COST: \$5,500,000

PROCEDURES: Prequalification Questionnaires available **Thursday, May 7, 2020, 4:00 PM.** Contact Kim Kerwin @ khou@hs.uci.edu.

QUESTIONNAIRE DUE DATE: Questionnaires must be received by **Thursday, May 21, 2020 at 2:00 PM** at UCIMC, Planning Administration, Building 27, Room 136, 101 The City Drive South, Orange, CA 92868.

GENERAL CONTRACTOR QUALIFICATIONS: Must have a current and active California CSLB "A" General Engineering or "B" General Building Contractor's license, insurance, bonding, safety, financial and claims history requirements. Must have completed a minimum of (2) projects in the last 7 years that meet all the criteria listed below and demonstrate the Contractor's ability to successfully complete the project with respect to project size, scope, cost, use, complexity, etc.:

1. Located in the State of California for which the construction cost was at least \$2,000,000 each;
2. Included underground utilities: electrical, water, sewer and steam;
3. Included the management of electrical, plumbing and HVAC subcontractors;
4. Included building a new road or road replacement, with curb and gutter work.

ELECTRICAL SUBCONTRACTOR QUALIFICATIONS: Must have a current and active California CSLB "C-10" Electrical Contractor's license, insurance, bonding, safety, financial and claims history requirements. Must have completed a minimum of (1) project in the last 7 years that meet the criteria listed below and demonstrate the Contractor's ability to successfully complete the project with respect to project size, scope, cost, use, complexity, etc.:

1. In a hospital or outpatient healthcare facility located in the State of California for which the subcontract amount was at least \$1,250,000 each;
2. Constructed in a limited and confined site adjacent to occupied buildings;
3. Included REROUTE OF INFRASTRUCTURE UTILITIES that included the installation of transformers, switchgear and ATSS for both normal and emergency power.

MECHANICAL SUBCONTRACTOR QUALIFICATIONS: Must have a current and active California CSLB "C-20" Warm-Air Heating, Ventilating and Air Conditioning and/or "C-36" Plumbing Contractor licenses, insurance, bonding, safety, financial and claims history requirements. Must have completed a minimum of (1) project in the last 7 years that meet the criteria listed below and demonstrate the Contractor's ability to successfully complete the project with respect to project size, scope, cost, use, complexity, etc.:

1. In a hospital or outpatient healthcare facility located in the State of California for which the subcontract amount was at least \$1,000,000 each;
2. Constructed in a limited and confined site adjacent to occupied buildings;
3. Included Installation of underground fusion welded HDPE chilled water pipes greater than 8" in diameter.

Bidders not meeting the requirements of the prequalification questionnaire will not be eligible to bid.

Prequalification is solely for the purpose of determining bidders who are deemed capable of successful performance of the type of work included in this project. A contract will be awarded to the prequalified bidder submitting the lowest responsive bid.

The University reserves the right to reject any or all responses to this notice, to waive non-material irregularities, and to deem Contractors prequalified to submit proposals for the project. To prequalify, Contractors must agree to comply with all bid conditions including state prevailing wages, 10% bid bond, 100% payment and performance bonds, and insurance requirements. All information submitted for prequalification evaluation will be considered official information acquired in confidence, and the University will maintain its confidentiality to the extent permitted by law.

Every effort will be made to ensure that all persons have equal access to contracts and other business opportunities with the University within the limits imposed by law or University policy. Each Proposer may be required to show evidence of its equal employment opportunity policy.

No contractor or subcontractor, regardless of tier, may be listed on a Bid for, or engage in the performance of, any portion of this project, unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5 and 1771.1.

This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

The successful Bidder shall pay all persons providing construction services and/or any labor on site, including any University location, no less than the UC Fair Wage (defined as \$13 per hour as of 10/1/15, \$14 per hour as of 10/1/16, and \$15 per hour as of 10/1/17) and shall comply with all applicable federal, state and local working condition requirements.
