

COVID-19's Impact on Commercial Construction Bidding

[Article was originally posted on www.constructconnect.com]

By: *Kendall Jones*

As a result of the coronavirus (COVID-19) pandemic and its impact on the global economy, the construction industry is facing extreme challenges caused by some state and local shutdowns which have closed construction sites, decreases in funding for public projects that rely on tax revenues, owners putting projects on hold or canceling projects due to economic uncertainty, and supply chain shortages both nationally and globally.

To better understand how the commercial construction industry is being impacted we've just released a new white paper, ConstructConnect Project Data Analysis in Light of the COVID-19 Economic Crisis. In it, we look at trends we from our project database for planning and bidding construction projects, including the number of new projects being added, projects being put on hold, bid date extensions, and more.

COVID-19 Impact on Bidding Projects

There's been a massive drop in the number of commercial construction projects bidding since late March. Prior to that, ConstructConnect was

reporting a higher number of project bids during the first three months of 2020 compared to the previous year.

While the rolling weekly average of total projects bidding in the U.S. is strong at ~20,000, we saw that steady increase suddenly plummet as we neared the end of March. In the second week of March we were reporting a 15% increase year over year. By April 22, that number bottomed out at -14.4% year over year.

The weekly rolling average has leveled out since then and with states that had deemed construction nonessential back in March starting to allow projects to move forward, it's hopeful that we won't see another downward trend.

Projects Placed "On Hold"

We're also seeing a steep increase in the number of construction projects, either in planning or recently bid, being placed on hold starting around the middle of March. That number peaked around the end of March at 140% over what the weekly rolling average was during the same time in 2019.

These numbers have since leveled out but are still up around 80% compared to what we were seeing in 2019. Civil/Heavy Engineering and Non-

residential sectors have seen some of the biggest increases, while Private sector projects are seeing a much lower increase in the number of projects being placed on hold.

Construction Projects Bid Date Delays

Across all construction types and building uses, ConstructConnect is also reporting a huge increase in the number of construction projects currently out to bid having their bid dates extended. As we saw with projects on hold, Private sector projects seeing less bid date extensions than Public sector construction projects.

Near the end of March, bid date delays were up 80% compared to the same time in 2019. Due to fewer projects going out to bid or being placed on hold, that number fell to 30% below last year's rate at the end of April. This makes sense since only those projects moving forward are being reported or converted from planning to bidding.

Abandoned Construction Projects

We can also look at the number of projects ConstructConnect is tracking that have been abandoned. These are projects that were either in the planning stages or put out to bid

California Sub-Bid Request Ads

Sub-Bids Requested from qualified **DBE** Subcontractors and Suppliers For:
PROGRESSIVE DESIGN-BUILD PUMP STATIONS IMPROVEMENTS

REDWOOD CITY PUMP STATION

Owner: Silicon Valley Clean Water

Location: Redwood City, CA

Bid Date: May 14, 2020 @ 2:00 P.M.

J.F. Shea / Parsons, a Joint Venture

667 Brea Canyon Road, Suite 30 • Walnut, CA 91789

Phone: (909) 595-4397, Fax: (909) 444-4268

UNIVERSITY OF CALIFORNIA, IRVINE MEDICAL CENTER**NOTICE INVITING GENERAL CONTRACTOR, ELECTRICAL OR MECHANICAL
SUBCONTRACTOR PREQUALIFICATION**

Prequalification Questionnaires will be received by the University of California, Irvine Medical Center (UCIMC) from general contractors, electrical and/or mechanical subcontractors, wishing to submit bids for a lump sum contract for the:

**Site Infrastructure & Vehicular Circulation
Upgrades, Project No. 994656**

PREQUALIFICATION: The University has determined that bidders must be prequalified for this project.

DESCRIPTION OF WORK: The following scopes are included in the Site Infrastructure and Vehicular Circulation Upgrades project: 1) reroute all the utilities in the current overhead canopies, including gas lines, steam supply and condensate return lines, 5KV electrical feeds, chilled water supply and return lines, DI water, fire alarm system wiring, Network IT and Telecom copper and fiber optics, 2) demolish the overhead canopy and parts of the sidewalk, including abatement of the asbestos roofing, 3) relocate storm drain and electrical systems currently running east to west, between buildings 24a and 26, 4) relocate and provide a new sewer, domestic water and fire water connection to building 21, 5) provide new chilled water supply and return lines to building 21 from existing pipes approx. 100 feet away, 6) provide new normal and emergency power, including conduit, feeders, transformers, switchgear and ATSS, from the building 34 to building 21, 7) provide steam supply and condensate return from building 31 to building 21, 8) extend the existing Valet drop off area, currently in front of building 22c, into the current grass area with additional curb and gutter, concrete and asphalt roadway, bollards, sidewalks, benches and landscaping, 9) provide Network IT and Telecom fiber for building 21 from adjacent locations, 10) relocate existing building 22A backflows and water meters for a new building 22A entry, 11) demolish building 80, 12) construct a new road with curb and gutter from the south side of the building 55 parking lot connecting to Service Way South, 13) concrete crosswalks, across the new road with adjacent sidewalks and landscaping, 14) and other work related to the items above.

PROJECT COMPLETION TIME:

200 calendar days.

ESTIMATED COST: \$5,500,000

PROCEDURES: Prequalification Questionnaires available **Thursday, May 7, 2020, 4:00 PM**. Contact Kim Kerwin @ khau@hs.uci.edu.

QUESTIONNAIRE DUE DATE: Questionnaires must be received by **Thursday, May 21, 2020 at 2:00 PM** at UCIMC, Planning Administration, Building 27, Room 136, 101 The City Drive South, Orange, CA 92868.

GENERAL CONTRACTOR QUALIFICATIONS: Must have a current and active California CSLB "A" General Engineering or "B" General Building Contractor's license, insurance, bonding, safety, financial and claims history requirements. Must have completed a minimum of (2) projects in the last 7 years that meet all the criteria listed below and demonstrate the Contractor's ability to successfully complete the project with respect to project size, scope, cost, use, complexity, etc.:

1. Located in the State of California for which the construction cost was at least \$2,000,000 each;
2. Included underground utilities: electrical, water, sewer and steam;
3. Included the management of electrical, plumbing and HVAC subcontractors;
4. Included building a new road or road replacement, with curb and gutter work.

ELECTRICAL SUBCONTRACTOR QUALIFICATIONS: Must have a current and active California CSLB "C-10" Electrical Contractor's license, insurance, bonding, safety, financial and claims history requirements. Must have completed a minimum of (1) project in the last 7 years that meet the criteria listed below and demonstrate the Contractor's ability to successfully complete the project with respect to project size, scope, cost, use, complexity, etc.:

1. In a hospital or outpatient healthcare facility located in the State of California for which the subcontract amount was at least \$1,250,000 each;
2. Constructed in a limited and confined site adjacent to occupied buildings;
3. Included REROUTE OF INFRASTRUCTURE UTILITIES that included the installation of transformers, switchgear and ATSS for both normal and emergency power.

MECHANICAL SUBCONTRACTOR QUALIFICATIONS: Must have a current and active California CSLB "C-20" Warm-Air Heating, Ventilating and Air Conditioning and/or "C-36" Plumbing Contractor licenses, insurance, bonding, safety, financial and claims history requirements. Must have completed a minimum of (1) project in the last 7 years that meet the criteria listed below and demonstrate the Contractor's ability to successfully complete the project with respect to project size, scope, cost, use, complexity, etc.:

1. In a hospital or outpatient healthcare facility located in the State of California for which the subcontract amount was at least \$1,000,000 each;
2. Constructed in a limited and confined site adjacent to occupied buildings;
3. Included Installation of underground fusion welded HDPE chilled water pipes greater than 8" in diameter.

Bidders not meeting the requirements of the prequalification questionnaire will not be eligible to bid.

Prequalification is solely for the purpose of determining bidders who are deemed capable of successful performance of the type of work included in this project. A contract will be awarded to the prequalified bidder submitting the lowest responsive bid.

The University reserves the right to reject any or all responses to this notice, to waive non-material irregularities, and to deem Contractors prequalified to submit proposals for the project. To prequalify, Contractors must agree to comply with all bid conditions including state prevailing wages, 10% bid bond, 100% payment and performance bonds, and insurance requirements. All information submitted for prequalification evaluation will be considered official information acquired in confidence, and the University will maintain its confidentiality to the extent permitted by law.

Every effort will be made to ensure that all persons have equal access to contracts and other business opportunities with the University within the limits imposed by law or University policy. Each Proposer may be required to show evidence of its equal employment opportunity policy.

No contractor or subcontractor, regardless of tier, may be listed on a Bid for, or engage in the performance of, any portion of this project, unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5 and 1771.1.

This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

The successful Bidder shall pay all persons providing construction services and/or any labor on site, including any University location, no less than the UC Fair Wage (defined as \$13 per hour as of 10/1/15, \$14 per hour as of 10/1/16, and \$15 per hour as of 10/1/17) and shall comply with all applicable federal, state and local working condition requirements.

COVID-19's Impact on Commercial Construction Bidding

■ Continued from page 1

that have been outright canceled with no plans of moving forward in the future. There was an uptick in abandoned projects around mid-March which has since leveled out, averaging around 10% above 2019 numbers.

This isn't really as much cause for concern as some of the other trends we've been seeing since the rolling weekly average rarely surpasses 100 projects.

ConstructConnect's Expansion Index

ConstructConnect's Expansion Index is a measure of construction projects in the planning and design stages for the U.S. and Canada based on year over year monthly numbers. The score in early March was 1.1048 and by the beginning of April it had increased 9.7% to a value of 1.2117. (For ConstructConnect's Expansion Index, any score

over 1.0 reflects an increase in planning projects and any score under 1.0 indicates a decrease.)

This probably is more a reflection of owners hitting the pause button on moving forward with construction and moving projects back into planning rather than new design projects coming in based on data from the American Institute of Architect's (AIA) Architectural Billings Index (ABI) for March.

March's ABI score fell a record 20.1 points from 53.4 in February to 33.3. There was also a massive drop in new inquiries and design contracts. This drop occurred in all regions and across all sectors of nonresidential construction. This is troubling news for construction as billings typically precede construction activity by 9 to 12 months.

Construction Starts Forecast

ConstructConnect also just released our Summer 2020 Construction Starts Forecast, and we're currently predicting that construction starts will be down 27.4% from around \$815 billion in 2019 to \$591.9 billion for all construction. Nonresidential is expected to be down 31.9% and residential is predicted to be down 28.6% from 2019.

Things should start bouncing back in 2021 where we are forecasting a 20.8% increase in construction starts, rising up to \$714.8 billion. This will all be dependent on how quickly the overall economy starts to bounce back as states begin lifting lockdown orders and businesses start getting back to whatever the new normal will be as a result of the COVID-19 crisis.

Meeting Expectations in the Millionaires' Playground: Construction in Monaco

[Article was originally posted on Autodesk Construction Cloud Blog. [constructionblog.autodesk.com](https://www.autodesk.com/ideas/constructionblog)]

By Amanda Fennell,

The view out to the Mediterranean Sea in Monaco is iconic. Stand at the seafront at the famous Port Hercule, and you'll see buildings hugging the cliff-fronts on your left, the ancient Rock of Monaco looming to your right and the topaz water in front of you – partially obscured by a few dozen millionaires' yachts.

Monaco is a fascinating state. Despite consisting of just two square-kilometres, the principality has hosted a legendary Hollywood royal romance, an iconic Grand Prix race dating back to 1929 and not one but three James Bond films (in just one casino).

It is also one of the most sought-after locations in the world. One million dollars will buy you a mere 17 square meters of prime property, compared to 30 in London. That is just one of the challenges facing construction projects. Monaco's very limited space, challenging coastal terrain, historical heritage and the most demanding inhabitants in the world combine to make building here a daunting undertaking.

Two new developments in Monaco are looking to meet the high expectations of construction in this iconic location: a luxury housing complex at Portier Cove and a new shopping centre at Fontvieille. So, how will these projects meet the demands of construction in a city called the millionaires' playground?

Expanding the land

Space has been tight in Monaco for a very long time. Nearly 40,000 people rub elbows together

in a space slightly smaller than New York's Central Park. Building options are also limited by the cliffs that rise above the coastal city. As a result, since the nineteenth century, construction projects have reclaimed land from the sea – forming a total of 100 acres, or one fifth of the total space.

Regulators are reluctant to either demolish older buildings or create massive skyscrapers, which risk ruining the aesthetic of the city – so once again, the coastline of Monaco is being extended further into the sea. The Portier Cove project involves extending the coastline into the sea, by a further 15 acres, which will provide accommodation for up to 1,000 wealthy inhabitants.

Protecting the environment

Sustainability is high on the agenda in Monaco, with the reigning monarch Prince Albert aiming to create a carbon-neutral economy by 2050. The Portier Cove project, therefore, gave serious consideration to the negative impact of reclaiming land on the local marine life. Before work started, protected plant species were moved to a nearby marine reserve – and during the construction phase, special underwater screens will insulate the site to minimise the disruption. Finally, ecological corridors will be used to create a variety of artificial habitats where fish can flourish.

Sustainability will be built into the structures above the ground too, through intelligent heat and energy systems. In the new apartments, large balconies will be used to provide shade and keep temperatures low in summer. Pumps will use sea water to heat and cool the buildings, and together with solar panels that will provide 40% of the energy needed, to reduce the long-term footprint of the development.

Complementing the scenery

Monaco's natural beauty has always been one of its main attractions, and since ancient times inhabitants have benefitted from the shelter of the Rock of Monaco and the high cliffs. The Fontvieille shopping centre development has tried to complement the existing natural scenery, to blend into the landscape.

The floors will be partly open air, allowing visitors to enjoy beautiful views of the sea and the surrounding cliffs on every level. The structure will also reflect the natural topography, nestling into the cliff with curved tiers gradually descending to the sea. Even the colours have been chosen to reflect Monaco's history, from the lavender of the hills to the blue of the sea and the grey of the cliffs. Rather than distracting from the harbour's natural beauty, the new development has been designed specifically to set it off.

Respecting local industry

Like many urban areas, construction projects in Monaco face the challenge of building in a busy area where many people both live and work. But the issue is intensified in a city where tourism – and particularly luxury tourism – forms a large part of the local economy. The Portier Cove development, for example, is in close proximity to the Fairmont Monte Carlo Hotel, which boasts of offering visitors views of the famous Monaco Grand Prix hairpin bends.

The construction work involves not only blocking parts of the sea view, but generating large volumes of noise. The hotel has even fitted noise sensors in rooms to monitor its guests' experience. In places like Monaco, where the sophisticated atmosphere is such a key attraction, construction companies

Meeting Expectations in the Millionaires' Playground: Construction in Monaco

Continued from page 5

are tasked with minimizing the disruption caused by each build as much as possible.

Preserving a famous history

The history of Monaco is incredible, from mentions by Roman authors Virgil and Tacitus to hosting residents like Karl Marx and Charles Pathé. Now more attention than ever is being paid to not only preserving historical buildings but – where needed – giving them a second lease of life. Firms like Cycle Up are promoting the potential of the circular economy to ensure that parts of historic buildings aren't simply lost to demolition, but re-used.

The Villa Carmelha tower in Saint-Roman will be the first in Monaco's history to provide features like its doors, tiles and false ceilings for re-use elsewhere. The drive towards adopting a circular approach to construction will not only help to pre-

serve the city's history, but significantly reduce the environmental impact of rebuilding – for a greener future.

The new Monaco

These new projects will require some time to take shape. The platform and infrastructure of Portier Cove will be completed in 2020, with the apartments ready for use in 2025. Meanwhile, the new shopping centre in Fontvieille will take two years to complete, once construction begins. By taking a considered approach to construction, developers in Monaco are ensuring their buildings represent a beautiful new stage in the city's fascinating development.
